PROFESSIONAL SUMMARY

Robotics and backend software developer with experience building Python software, automated data pipelines, APIs, scalable Firebase systems, and AI/ML applications. Current Meta Teleoperator with hands-on exposure to real-world robot operation; previously supported robotics data collection and quality control at NVIDIA. Built multi-source ETL, real-time backends, and Claude-integrated tools with a focus on debugging, data correctness, reliability, and cross-functional delivery.

TECHNICAL SKILLS

Languages: Python, C++, Java, Dart

Backend and data: Flask, Firebase, REST APIs, ETL, real-time synchronization, API integration, data validation

AI/ML: PyTorch, TensorFlow, Keras, scikit-learn, reinforcement learning, computer vision, Claude API

Robotics and tools: ROS, teleoperation, LiDAR, SLAM, sensors, simulation, control, Git/GitHub, Jupyter

EXPERIENCE

Meta

Teleoperator

Sep 2026 - Present

- Operate robotic systems through teleoperation in support of real-world robotics workflows.

NVIDIA

Robotics

San Jose, CA

Apr 2026 - Aug 2026

- Collected UMI and teleoperation demonstration data on real-world robotics platforms for learning-from-demonstration and embodied AI.
- Reviewed and quality-checked robotics datasets, identifying invalid runs and annotation inconsistencies before model training and evaluation.
- Partnered with engineers on repeatable collection protocols, system issue reporting, and improvements to experimental data reliability.
- Supported Python and C++ robotics workflows and troubleshoot hardware-software problems affecting robot operation and data capture.

Robolabs

Robotics Software Developer

San Jose, CA

Jun 2025 - Present

- Led development of a Flutter and Firebase inventory platform with real-time synchronization and scalable backend architecture.
- Built and deployed the V5RC Agent Manual iOS app, an AI-powered assistant for robotics teams interpreting competition rules.
- Developed and optimized autonomous robotics pipelines in ROS, Python, and C++, integrating computer vision, sensors, simulation, and control.

Santa Clara University Athletics

Software Developer

Santa Clara, CA

Oct 2024 - Jun 2025

- Built a central data hub integrating four performance APIs through Google Suite and Apps Script.
- Automated ETL pipelines, reducing manual data merges by more than 90% and enabling near-real-time dashboards for 5+ teams.
- Partnered with data science staff on injury-risk and periodization-model features, reducing data defects by more than 60%.

PROJECTS

Literally Cooking

- Built a Flutter and Flask application that converts recipes into a parallelized cooking plan; integrated Spoonacular and Claude APIs with Firebase session storage and delivered a working demo in 24 hours. [GitHub](#)

CNN Image Classifier - I See You

- Implemented VGG16, MobileNetV2, and ResNet50 in TensorFlow/Keras; achieved 92.61% accuracy using transfer learning and weighted loss on a 1,372-image dataset. [GitHub](#)

EDUCATION

Santa Clara University

B.S. Computer Science, Minor in Mathematics

Santa Clara, CA

Mar 2026

Relevant coursework: Algorithms, Data Structures, Data Science, Applied Machine Learning, Design and Management of Software, Operating Systems, Data Mining
